

FACULTY OF DENTISTRY

GRADUATION PROJECTS

2016/2017

Dean's Welcome

I would like to welcome all our students and congratulate them for choosing MSA for their education. Since you are all distinguished students, this will impose a heavy burden on the Faculty Staff, but I assure you that you will receive the best possible education preparing you to provide the most up to date service to your patients and society. You will also have an excellent opportunity during the five years of your study to enjoy our social, cultural and sports activities. I hope that you will all participate in the fields of your choice and enjoy the facilities that the University has to offer. I assure you that you will spend the most enjoyable and fruitful five years of your life.

May I again welcome and congratulate you all and extend an advice to our students to work hard to make the best of what we have to offer.

Best of luck.

**Professor/ Salah Hamed.
Dean of the Faculty of Dentistry.
MSA University.**

TOP PROJECTS

Surgical Navigation in Dental Implants

Abstract:

Surgical Navigation is a new technology used for accurate positioning of the dental implants very similar to a commonly used navigation system in a car. The jaw contains two sets of special ceramic spheres. One set of ceramic spheres acts as the fiducial markers. The second set is used as reference markers. It provides guidance of the surgical instruments based on a pre-surgical plan and maximize the length of the implants.

It was reported that surgical navigation has extremely high precision. Study shows an average deviation of about 0.9-0.8 mm. Another result with accuracy of 1.44 ± 0.18 mm was measured in the surgical setup and 0.63 ± 0.07 mm under ideal conditions. This technology offers surgeons an additional tool that empowers more comprehensive and conscientious clinical decisions.

Esthetic Rehabilitation

Abstract :

A 33 years old female presented to the dental clinic complaining about her smile and the shape of her teeth. Chief complaint: "I've been ashamed of the look of my teeth for a long time and I hope to re-gain my smile". She had multiple defective restorations in her anterior teeth, multiple carious lesions and an incomplete reduced central that made her lack her self-confidence. Expectations: According to the best available treatment options for her teeth, E- max crowns are indicated.

Hamad.salem@msa.edu.eg

Abstract:

Smart Dentin Replacement (SDR) is a unique and patented formulation of bulk-fill flowable composite base material. A reduced number of procedural steps versus conventional layering up to 40% time is saved, and up to 60% less shrinkage stress. Advantages of SDR include single component, fluoride contain, Self-levelling, and excellent adaptation. It can be placed in 4mm bulk-fill increments. Moreover, it is Compatible with all methacrylate based bonding and composites for capping.

Self leveling consistency for excellent cavity adaptation

SDR flow-like consistency results in excellent cavity adaptation. Conventional flowable as liner is no longer needed.

SDR provides ideal self-levelling

Result: excellent cavity adaptation with SDR.

Restoration made with conventional universal composite (pulpal view). Restoration made with SDR (pulpal view).

Aalyah Hasan

aaliah.hasan@msa.edu.eg

Abstract:

It's undeniable that the demand on dental implants has been on the rise recently. Many patients show frustration about waiting for healing after extraction, hence the idea of immediate implants came up. An immediate implant is an implant placed immediately after tooth extraction. But like any procedure, it has contraindications so patient selection is of high importance; moreover, the techniques may differ accordingly.

Pediatric Dentistry Department

Pain Free Dentistry

Abstract:

Receiving dental treatment is one of the biggest fears to any patient because of pain and discomfort. Now dental therapy became more reliable to the patient because of developing the concept of pain free dentistry. This topic will cover the recent techniques and modalities to provide pain free dentistry in giving local anesthesia or during cavity preparation and caries removal.
